General Inspection Report

DATE: 23/02/06 TO 19/03/06.

(BC 14) REPORT No 199. SIDE SPAN SOUTH

The Side span south was visually inspected over an intermittent period between the above dates, general findings were as follows:

<u>Structural steelwork.</u>: The Structural steelwork was generally found to be in a satisfactory condition. No replacement of bolts carried out. Total remains as last inspection, (11in No).

<u>Stringer bearing wear.</u>: Continues to increase. (**As advised on Side span north report.**) End trimmer weld failure at **PP. 30 S/W.**

<u>Paintwork / corrosion/ Bird dropping contamination.</u>: Situation continues to deteriorate as no remedial works have been carried during recent years due to no upper front or Gantry access works.

<u>Slow lane grillage.</u>: Traffic management restrictions dictate the inspection of the grillage & handrails. This will be covered by a separate survey for the whole of the suspended structure, **ie.** both side spans & main span.

Bridge Inspectors.:
